# NORTHERN TRUST ASSET MANAGEMENT THE NT WORLD GREEN TRANSITION INDEX FEEDER FUND

## **Investment Objective**

The Fund is a UCITS feeder fund. The Funds' investment objective is to invest at least 85% of its assets in the Northern Trust World Green Transition Index Fund (the "Master Fund") a Sub-Fund of the Northern Trust UCITS Common Contractual Fund, the investment objective of which is to closely match the risk and return characteristics of the MSCI World Custom ESG Climate Series A Index (the "Index") with net dividends reinvested and exclude securities that do not meet certain environmental, social and governance (ESG) criteria whilst seeking a reduction in carbon intensity and potential emissions from fossil fuels relative to the Index.

The Master Fund invests in equities (that is, shares and other similar kinds of assets) issued by or relating to companies included in the Index.

The Index is a custom index which corresponds with the MSCI World Index with the exclusion of companies not considered to meet socially responsible principles identified by applying criteria that refer to the UN Global Compact ten principles, as well as other ESG criteria selected by the Investment Manager.

Target Market: This Fund is appropriate for investors looking to invest over the medium to long term; and are looking for a passively managed investment in the relevant market(s) with ESG principles implemented according to a defined set of exclusions as well as assessment of ESG ratings.

Performance is calculated from the inception of the share class. All data shown is net of fees. Please refer to the Fund prospectus for pricing information.

\* Performance shown annualized for periods greater than 1 year.

Where your own currency is different to the currency of the fund's investments, the fund's returns can also be affected by fluctuations in currency exchange.

The unswung initial launch price has been used as the starting point for performance. Thereafter swung NAVs are used. Please note the above represents the performance that was achievable by eligible Dutch investors and includes income distributions gross of Dutch withholding tax because these investors receive a refund of the 15% Dutch withholding tax levied. Different investor types and investors from other jurisdictions may not be able to achieve the same level of performance due to their tax status and local tax rules.

#### **RISK WARNINGS**

Investment Risk - An investment in the Fund involves investment risks including possible loss of the amount invested.

Counterparty Risk - In case of bankruptcy of the broker, there is no guarantee collateral held by the broker will be returned to the Fund. In the event of bankruptcy of the counterparty, the premium and any unrealised gains may be lost.

Derivative Risk - Derivatives may result in gains or losses that are greater than the original amount invested.

Valuation Risk - A position in the Fund may be valued incorrectly, as some prices may be uncertain at a point in time.

Currency Risk - Where a class of shares are in a currency other than the base currency of the Fund, the non-base share classes of the Fund may be affected unfavourably by fluctuations in currency rates.

Risks associated with investing in the Master Fund - The value of this Fund and the income from it is closely linked to the performance of the Master Fund. There is no guarantee that the investment objective of the Master Fund will be achieved. As a unitholder of the Master Fund, this Fund bears, along with other unitholders, its pro rata portion of the expenses of the Master Fund. These fees are in addition to the other fees and expenses which this Fund bears directly in connection with its own operations.

#### CARBON DATA METRICS

Carbon footprint of the index constituents versus parent

NT Index Fund
Standard Benchmark

Potential carbon emissions are emissions of fossil fuel companies that can be potentially released should all the fossil fuel reserves they own be extracted. This field represents the potential carbon emissions of the fossil fuel reserves owned by a company using a formula from the Potsdam Institute for Climate Impact research. Carbon intensity represents the company's most recently reported or estimated Direct (fuel combustion, company vehicles) and Indirect (purchased electricity heat and steam) greenhouse gas emissions.
